

How To:

Adjustable Drippers

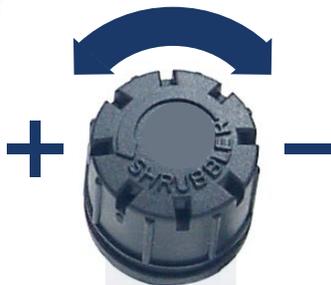

A Guide To Gallonage

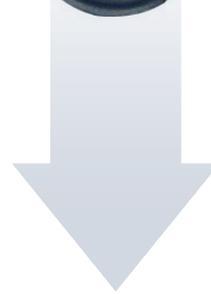

Adjustable Drippers and Adjustable Dripper Stakes are extremely versatile. They can easily be dialed from a one gallon per hour drip up to a ten gallon per hour eight-stream spray. Whether watering potted plants or irrigating a flower bed, you're never more than a couple "clicks" from the ideal gallonage.

Follow the chart below to accurately set water usage with our Adjustable Drippers and Adjustable Dripper Stakes. To begin, make sure the adjustable head is completely closed by turning it all the way to the right. Now, the appropriate gallonage can be set by counting "clicks" as you rotate. Note: If the adjustable head is rotated to the left beyond what is recommended, it can come off during use. If an adjustable head is lost, replacement parts are available.

Rotate to the left to **INCREASE** gallonage

Rotate to the right to **DECREASE** gallonage

Click/Gallonage Chart

Note: With this chart, clicks are counted only from the fully closed position.

Desired GPH	1	2	3	4	5	6	7	8	9	10
Number of Clicks	4	6-7	9	10	11	12-13	14-15	16	17-18	20
